Strategy Guide on 4th Page

Fisher is composed of 2 components: Fisher Base -&- Fisher S1

Subscribe to the Fisher Indicator for \$150 each month . If you would like to make a one time payment please contact our sales department .

Fisher Base & Fisher S1 combine to make the Fisher Trading Indicator

The brochure includes the list , details , and illustrations of all the features .

The strategy guide shows simple ways to increase profits, and guides to your own solutions.

The components can be used seperately . If you can build a better strategy utilizing just Fisher SI , then go for it . They will both be of great trading assistance. . .

S1 Label Control

From the settings modify how close the <u>Labels</u> get to the trendline .

Base Market Pivots

The Market Pivots serve as a reminder of market directional switch.

Base Levels

The levels provide further control into market decisions .

Fisher Strategy Guide

Principals Of Trading

Wining Percentage:

The first variable that must be known when selecting a trading strategy is the percentage of how often a trade transaction experiences a profit.

Select A Wining Time Frame:

First find the time frame where the indicator can be applied to obtain a better wining percentage.

The Rule Of Thumb, trading must take place within a time frame that has experienced profits 3 to 4 consecutive times while utilizing Fisher. The rule will protect your account and provide good profits. After executing a good amount of trades, take some time to look into time frames where accomplishing profits require a bit more understanding of the indicator or of overall market behavior.

As experience is gained, it will be feasibly seen that it is more convenient to trade in high time frames like the Day, 4 Hour, 2 Hour, and 1 Hour. The lower time frames will proof more challenging, and it is necessary to make sure that alerts occur at Fisher Base Levels between 2.5 and 5 or -2.5 to -5. Entering the market within these levels increase the wining odds dramatically more for lower frames than for higher ones.

Strategy Optimization :

After understanding the time frame where wining happens well, the next step is to look into the frames that will require a bit more rules. If a trading style that requires more rules is not in your comfort zone, then just use the indicator as a screener. Apply Fisher to many market symbols and build a list of symbols with time frames where the Rule Of Thumb matches. With a long list of symbols that have been screened correctly, your desk will be filled with profitable trading executions.

Emporos Research provides training on Long, Swing, and Scalp Trading. Contact us for arrangements, or visit www.emporosreserach.com for more information.
